

VISION THERAPY AT HOME

We can SEE it now: This is the start of something big.

Great! You've completed our Symptom Checklist. This is an exciting step toward helping you or your child succeed in school, work, sports, and life.

We've already started the ball rolling by producing the personalized report below. This report covers the following:

- Your individual score
- A quick overview of the four areas of functional vision (did you know there are four?)
- A detailed breakdown about each area

MYSELF'S SCORE: 90

0-25

26-35

35-60

**Possible Visual
Problem**

**Probable Visual
Problem**

**Definite Visual
Problem**

**Severe Visual
Problem**

Here's what your results mean:

Based on the information you provided, myself has symptoms that suggest a SEVERE problem with functional vision. Remember—functional vision is different from eyesight. You can have 20/20 eyesight and still face serious functional vision problems.

Concerned about your results? Don't panic—problems with functional vision are extremely common, and they're also treatable. You did a wonderful thing by taking this step.

Read on to find:

- Your personalized results
- Which symptoms relate to which area of functional vision
- How Vision Therapy at Home can help

Ready? Let's Go!

• Skipping lines/words

- Poor hand/eye coordination

What can Vision Therapy at Home do for me?

VTAH can help you or your child become faster, more efficient readers—and that opens the door to enjoying reading. VTAH can also improve sports performance.

- Unusually tired after completing a visual task
- Letters or lines “run together” or words appear to “jump” when reading
- Difficulty tracking moving objects
- Clumsiness or poor coordination
- Difficulty with eye-hand coordination sports such as baseball
- Losing awareness of surroundings when concentrating
- Feel sleepy while reading
- Avoid near tasks such as reading
- Car sickness or motion sickness
- Excessive blinking
- Excessive eye rubbing
- Dry eyes
- Watery eyes
- Sensitivity to light
- Red eyes

*** Many symptoms relate to more than one area of functional vision.**

Focusing

What is focusing?

FOCUSING is the ability of the eyes and brain to work together to produce a clear image of an object, maintain that clarity, and allow you to switch back and forth between distances with ease (such as looking from your notebook up to the chalkboard—or from your phone up to the TV!).

Far Near Far Near

What does poor eye focusing mean for me?

People with poor eye focusing often face symptoms including:

- Headaches
- Excessive blinking
- Poor stamina with homework
- Inattention
- Difficulty copying from the board in school

What can Vision Therapy at Home do for me?

VTAH can help you or your child reduce or eliminate headaches; improve stamina and comprehension with homework and reading; and enhance focus and attention.

**Focusing
represents
19% of your overall
symptoms.**

Here are the symptoms you checked:

- Substitute words while reading or copying
- Read very slowly
- Poor reading comprehension, difficulty remembering what you've read
- Headaches after intense visual activities such as reading or computer work
- Eyes hurt or feel tired after close work
- Unusually tired after completing a visual task
- Print moves or goes in and out of focus when reading
- Clumsiness or poor coordination
- Losing awareness of surroundings when concentrating
- Feel sleepy while reading
- Avoid near tasks such as reading
- Car sickness or motion sickness
- Excessive blinking
- Excessive eye rubbing
- Dry eyes
- Watery eyes
- Sensitivity to light
- Red eyes

*** Many symptoms relate to more than one area of functional vision.**

- Lack of coordination
- Poor depth perception

What can Vision Therapy at Home do for me?

VTAH can increase your eyes' "stamina" for handling up-close tasks, such as homework and reading. This can improve concentration and comprehension.

VTAH can also improve hand-eye coordination which can improve overall coordination.

- or focus when reading
- Letters or lines "run together" or words appear to "jump" when reading
- Difficulty tracking moving objects
- Clumsiness or poor coordination
- Difficulty with eye-hand coordination sports such as baseball
- Losing awareness of surroundings when concentrating
- Feel sleepy while reading
- Avoid near tasks such as reading
- Car sickness or motion sickness
- Excessive blinking
- Excessive eye rubbing
- Dry eyes
- Watery eyes
- Sensitivity to light
- Red eyes

*** Many symptoms relate to more than one area of functional vision.**

Visual Processing

What is visual processing?

VISUAL PROCESSING is the brain's ability to understand what you see and apply meaning to it. This is an essential part of learning, and it impacts areas such as handwriting, spelling, reading comprehension, and other perceptual skills.

p b d q

What does poor visual processing mean for me?

People with poor visual processing often face symptoms including:

- Tendency to mix up letters such as “p” and “q;” and “b” and “d”
- Poor spelling
- Difficulty remembering math facts
- Problems learning new concepts
- Confusion over left vs. right, and trouble with directions

What can Vision Therapy at Home do for me?

VTAH can help you or your child improve ability to learn new concepts (which makes a big difference in enjoyment of school and work!); reduce or eliminate confusion over letters and words; improve math recall and memory; and enhance sense of direction.

**Visual Processing
represents
17% of your overall
symptoms.**

Here are the symptoms you checked:

- Substitute words while reading or copying
- Poor reading comprehension, difficulty remembering what you've read
- Crooked or poorly spaced writing
- Poor spelling skills
- Clumsiness or poor coordination
- Losing awareness of surroundings when concentrating
- Confuse right and left directions
- You must feel things to “see” them
- Unable to make a picture in your mind while reading
- Poor word recall & recognition
- Difficulty following instructions (written or verbal)
- Unable to remember a series of tasks

*** Many symptoms relate to more than one area of functional vision.**
