

#### We can SEE it now: This is the start of something big.

Great! You've completed our Symptom Checklist. This is an exciting step toward helping you or your child succeed in school, work, sports, and life.

We've already started the ball rolling by producing the personalized report below. This report covers the following:

- Your individual score
- A quick overview of the four areas of functional vision (did you know there are four?)
- A detailed breakdown about each area

### **PIPER'S SCORE: 34**

0-25	26-35	35-60	61+
Possible Visual	Probable Visual	Definite Visual	Severe Visual
Problem	Problem	Problem	Problem

### Here's what your results mean:

Based on the information you provided, Piper has symptoms that suggest a PROBABLE problem with functional vision. Remember—functional vision is different from eyesight. You can have 20/20 eyesight and still face serious functional vision problems.

Concerned about your results? Don't panic—problems with functional vision are extremely common, and they're also treatable. You did a wonderful thing by taking this step.

#### Read on to find:

- Your personalized results
- Which symptoms relate to which area of functional vision
- How Vision Therapy at Home can help

Ready? Let's Go!

Poor hand/eye coordination

## What can Vision Therapy at Home do for me?

VTAH can help you or your child become faster, more efficient readers—and that opens the door to enjoying reading. VTAH can also improve sports performance.

- Below grade level on standardized tests
- \* Many symptoms relate to more than one area of functional vision.

## **Focusing**

### What is focusing?

**FOCUSING** is the ability of the eyes and brain to work together to produce a clear image of an object, maintain that clarify, and allow you to switch back and forth between distances with ease (such as looking from your notebook up to the chalkboard—or from your phone up to the TV!).

# What does poor eye focusing mean for me?

People with poor eye focusing often face symptoms including:

- Headaches
- Excessive blinking
- Poor stamina with homework
- Inattention
- Difficulty copying from the board in school

# What can Vision Therapy at Home do for me?

VTAH can help you or your child reduce or eliminate headaches; improve stamina and comprehension with homework and reading; and enhance focus and attention. ×

# Focusing represents 24% of your overall symptoms.

## Here are the symptoms you checked:

- Substitute words while reading or copying
- Read very slowly
- Poor reading comprehension, difficulty remembering what you've read
- Unusually tired after completing a visual task
- Restless when working at a desk
- Dislike tasks requiring sustained concentration
- Avoid near tasks such as reading
- Car sickness or motion sickness
- Below grade level on standardized tests
- \* Many symptoms relate to more than one area of functional vision.

Lack of Coordination

• Poor depth perception

What can Vision
Therapy at Home do for me?

VTAH can increase your eyes' "stamina" for handling up-close tasks, such as homework and reading. This can improve concentration and comprehension.

VTAH can also improve hand-eye coordination which can improve overall coordination.

\* Many symptoms relate to more than one area of functional vision.

## **Visual Processing**

### What is visual processing?

**VISUAL PROCESSING** is the brain's ability to understand what you see and apply meaning to it. This is an essential part of learning, and it impacts areas such as handwriting, spelling, reading comprehension, and other perceptual skills.

p b d q

# What does poor visual processing mean for me?

People with poor visual processing often face symptoms including:

- Tendency to mix up letters such as "p" and "q;" and "b" and "d"
- Poor spelling
- Difficulty remembering math facts
- Problems learning new concepts
- Confusion over left vs. right, and trouble with directions

# What can Vision Therapy at Home do for me?

VTAH can help you or your child improve ability to learn new concepts (which makes a big difference in enjoyment of school and work!); reduce or eliminate confusion over letters and words; improve math recall and memory; and enhance sense of direction.

×

# Visual Processing represents 22% of your overall symptoms.
