

VISION THERAPY AT HOME

We can SEE it now: This is the start of something big.

Great! You've completed our Symptom Checklist. This is an exciting step toward helping you or your child succeed in school, work, sports, and life.

We've already started the ball rolling by producing the personalized report below. This report covers the following:

- Your individual score
- A quick overview of the four areas of functional vision (did you know there are four?)
- A detailed breakdown about each area

BRIAN JOHNSON TEST'S SCORE: 8

0-25

26-35

35-60

61+

Possible Visual Problem

Probable Visual Problem

Definite Visual Problem

Severe Visual Problem

Here's what your results mean:

Based on the information you provided, Brian Johnson TEST has symptoms that suggest NORMAL VISION to a POSSIBLE problem with functional vision. Remember—functional vision is different from eyesight. You can have 20/20 eyesight and still face serious functional vision problems.

Concerned about your results? Don't panic—problems with functional vision are extremely common, and they're also treatable. You did a wonderful thing by taking this step.

Read on to find:

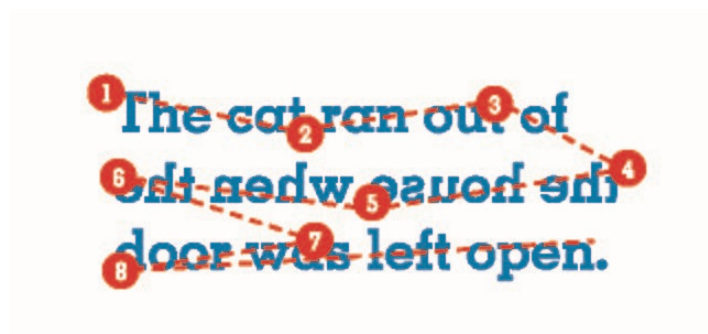

- Your personalized results
- Which symptoms relate to which area of functional vision
- How Vision Therapy at Home can help

Ready? Let's Go!

Tracking

What is tracking?

TRACKING is the ability to move our eyes efficiently in the direction we want to go. For example: Tracking a line of words on a page while reading, or watching a ball coming towards us while playing catch.

(An example of poor tracking)

What does poor eye tracking mean for me?

People with poor eye teaming often face symptoms including:

- Poor reading ability
 - Slow reading speed
 - Difficulty learning new words
 - Lack of comprehension
 - Skipping lines/words
- Poor hand/eye coordination

What can Vision Therapy at Home do for me?

VTAH can help you or your child become faster, more efficient readers—and that opens the door to enjoying reading. VTAH can also improve sports performance.

**Tracking represents
29% of your overall
symptoms.**

Here are the symptoms you checked:

- Skip words while reading or copying
- Dislike tasks requiring sustained concentration

*** Many symptoms relate to more than one area of functional vision.**

What can Vision Therapy at Home do for me?

VTAH can help you or your child reduce or eliminate headaches; improve stamina and comprehension with homework and reading; and enhance focus and attention.

Eye Teaming (Binocularity)

What is eye teaming?

EYE TEAMING is the brain's ability to coordinate your eyes—first to determine where an object is, and then to accurately point at that object.

What does poor eye teaming mean for me?

People with poor eye teaming often face symptoms including:

- Headaches
- Fatigue
- Clumsiness
- Lack of coordination
- Poor depth perception

What can Vision Therapy at Home do for me?

VTAH can increase your eyes' "stamina" for handling up-close tasks, such as homework and reading. This can improve concentration and comprehension.

VTAH can also improve hand-eye coordination which can improve overall coordination.

**Eye Teaming
represents
29% of your overall
symptoms.**

Here are the symptoms you checked:

- Skip words while reading or copying
- Dislike tasks requiring sustained concentration

*** Many symptoms relate to more than one area of functional vision.**

concepts

- Confusion over left vs. right, and trouble with directions

What can Vision Therapy at Home do for me?

VTAH can help you or your child improve ability to learn new concepts (which makes a big difference in enjoyment of school and work!); reduce or eliminate confusion over letters and words; improve math recall and memory; and enhance sense of direction.
