

We can SEE it now: This is the start of something big.

Great! You've completed our Symptom Checklist. This is an exciting step toward helping you or your child succeed in school, work, sports, and life.

We've already started the ball rolling by producing the personalized report below. This report covers the following:

- Your individual score
- A quick overview of the four areas of functional vision (did you know there are four?)
- A detailed breakdown about each area

RILEY'S SCORE: 63

Here's what your results mean:

Based on the information you provided, Riley has symptoms that suggest a SEVERE problem with functional vision. Remember?functional vision is different from eyesight. You can have 20/20 eyesight and still face serious functional vision problems.

Concerned about your results? Don't panic?problems with functional vision are extremely common, and they're also treatable. You did a wonderful thing by taking this step.

Read on to find:

- Your personalized results
- Which symptoms relate to which area of functional vision
- How Vision Therapy at Home can help

Ready? Let's Go!

Tracking

What is tracking?

TRACKING is the ability to move our eyes efficiently in the direction we want them to go. For example: Tracking a line of words on a page while reading, or watching a ball coming towards us while playing catch.

(An example of poor tracking)

What does poor eye tracking mean for me?

People with poor eye teaming often face symptoms including:

- Poor reading ability
 - Slow reading speed
 - Difficulty learning new words
 - Lack of comprehension
 - Skipping lines/words
- Poor hand/eye coordination

Tracking represents 28% of your overall symptoms.

Here are the symptoms you checked:

- Skip words while reading or copying
- Reread words or lines
- Use a finger or marker to keep place while reading/writing
- Read very slowly
- Headaches after intense visual activities such as reading or computer work
- Unusually tired after completing a visual task
- Letters or lines “run together” or words appear to “jump” when reading
- Difficulty tracking moving objects
- Clumsiness or poor coordination
- Difficulty with eye-hand coordination sports such as baseball
- Car sickness or motion sickness
- Excessive blinking
- Excessive eye rubbing
- Below grade level on standardized tests

* Many symptoms relate to more than one area of functional vision.

What can Vision Therapy at

Home do for me?

VTAH can help you or your child become faster, more efficient readers?and that opens the door to enjoying reading. Non-readers get more control of their eye movements, which leads to the ability to learn the recognition of letters and numbers and thus reading. VTAH can also improve sports performance. The better athlete you are before you start VTAH, the better athlete you will be as you work through the program.

Focusing

What is focusing?

FOCUSING is the ability of the eyes and brain to work together to produce a clear image of an object, maintain that clarity, and allow you to switch back and forth between distances with ease (such as looking from your notebook up to the chalkboard? or from your phone up to the TV!).

Far Near Far Near

What does poor eye focusing mean for me?

People with poor eye focusing often face symptoms including:

- Headaches
- Excessive blinking
- Poor stamina with homework
- Inattention
- Difficulty copying from the board in school

Focusing represents 19% of your overall symptoms.

Here are the symptoms you checked:

- Read very slowly
- Close (within 7-8") to reading and/or writing material
- Headaches after intense visual activities such as reading or computer work
- Unusually tired after completing a visual task
- Vision blurs at distance when looking up from near work
- Clumsiness or poor coordination
- Car sickness or motion sickness
- Excessive blinking
- Excessive eye rubbing
- Below grade level on standardized tests

*** Many symptoms relate to more than one area of functional vision.**

What can Vision Therapy at Home do for me?

VTAH can help you or your child reduce or eliminate headaches; improve stamina and comprehension with homework and reading; and enhance focus and attention.

Non-readers will be able to see letters and numbers with more clarity and ease, which leads to learning to read.

Eye Teaming (Binocularity)

What is eye teaming?

EYE TEAMING is the brain's ability to coordinate your eyes first to determine where an object is, and then to accurately point at that object.

What does poor eye teaming mean for me?

People with poor eye teaming often face symptoms including:

- Headaches
- Fatigue
- Clumsiness
- Lack of coordination
- Poor depth perception

Eye Teaming represents 37% of your overall symptoms.

Here are the symptoms you checked:

- Skip words while reading or copying
- Reread words or lines
- Use a finger or marker to keep place while reading/writing
- Read very slowly
- Close (within 7-8") to reading and/or writing material
- Squint, close or cover one eye while reading
- Tilt head in an unusual posture when reading or writing
- Headaches after intense visual activities such as reading or computer work
- Unusually tired after completing a visual task
- Vision blurs at distance when looking up from near work
- Letters or lines "run together" or words appear to "jump" when reading
- Difficulty tracking moving objects
- Clumsiness or poor coordination
- Difficulty with eye-hand coordination sports such as baseball
- Car sickness or motion sickness
- Excessive blinking

- Excessive eye rubbing
- Below grade level on standardized tests

*** Many symptoms relate to more than one area of functional vision.**

What can Vision Therapy at Home do for me?

VTAH can increase your eyes' stamina for handling up-close tasks, such as homework and reading. This can improve concentration and comprehension.

VTAH can also improve hand-eye coordination which can improve overall coordination.

Poor eye-teaming may also cause double vision while reading or attempting to read and recognize letters and numbers. VTAH decreases or eliminates double vision, thus allowing them to read better and more clearly.

Visual Processing

What is visual processing?

VISUAL PROCESSING is the brain's ability to understand what you see and apply meaning to it. This is an essential part of learning, and it impacts areas such as handwriting, spelling, reading comprehension, and other perceptual skills.

p b d q

What does poor visual processing mean for me?

People with poor visual processing often face symptoms including:

- Tendency to mix up letters such as ?p? and ?q;? and ?b? and ?d?
- Poor spelling
- Difficulty remembering math facts
- Problems learning new concepts
- Confusion over left vs. right, and trouble with directions

Visual Processing represents 15% of your overall symptoms.

Here are the symptoms you checked:

- Misalign letters or numbers
- Clumsiness or poor coordination
- You must feel things to “see” them
- Uses fingers to count for math
- Does not know math facts automatically
- Unable to remember a series of tasks
- Below grade level on standardized tests

*** Many symptoms relate to more than one area of functional vision.**

What can Vision Therapy at Home do for me?

VTAH can help you or your child improve ability to learn new concepts (which makes a big difference in enjoyment of school and work!); reduce or eliminate confusion over letters and words; improve math recall and memory; and enhance sense of direction.
