

#### We can SEE it now: This is the start of something big.

Great! You've completed our Symptom Checklist. This is an exciting step toward helping you or your child succeed in school, work, sports, and life.

We've already started the ball rolling by producing the personalized report below. This report covers the following:

- Your individual score
- A quick overview of the four areas of functional vision (did you know there are four?)
- A detailed breakdown about each area

## **VICTOR'S SCORE: 61**

#### Here's what your results mean:

Based on the information you provided, Victor has symptoms that suggest a SEVERE problem with functional vision. Remember—functional vision is different from eyesight. You can have 20/20 eyesight and still face serious functional vision problems.

Concerned about your results? Don't panic—problems with functional vision are extremely common, and they're also treatable. You did a wonderful thing by taking this step.

Read on to find:

- Your personalized results
- Which symptoms relate to which area of functional vision
- How Vision Therapy at Home can help

## Ready? Let's Go!

Poor hand/eye coordination

## What can Vision Therapy at Home do for me?

VTAH can help you or your child become faster, more efficient readers—and that opens the door to enjoying reading. VTAH can also improve sports performance.

- moving objects
- Restless when working at a desk
- Losing awareness of surroundings when concentrating
- Below grade level on standardized tests

\* Many symptoms relate to more than one area of functional vision.

## Focusing

## What is focusing?

**FOCUSING** is the ability of the eyes and brain to work together to produce a clear image of an object, maintain that clarify, and allow you to switch back and forth between distances with ease (such as looking from your notebook up to the chalkboard—or from your phone up to the TV!).

#### What does poor eye focusing mean for me?

People with poor eye focusing often face symptoms including:

- Headaches
- Excessive blinking
- Poor stamina with homework
- Inattention
- Difficulty copying from the board in school

#### What can Vision Therapy at Home do for me?

VTAH can help you or your child reduce or eliminate headaches; improve stamina and comprehension with homework and reading; and enhance focus and attention. Focusing represents 14% of your overall symptoms.

×

## Here are the symptoms you checked:

- Substitute words while reading or copying
- Read very slowly
- Poor reading comprehension, difficulty remembering what you've read
- Make errors when copying
- Restless when working at a desk
- Losing awareness of surroundings when concentrating
